

**RISK ASSESSMENT FOR AN ACTIVITY INVOLVING  
DELIBERATE WORK WITH RECOMBINANT ADENOVIRUSES**

The following risk assessment form is divided into two parts an administrative section and the assessment part.

The aim is to take the scientist proposing the work through the process in a logical and systematic way. It is hoped that the structure provided within the format itself will assist researchers in organising their thought processes and that it will indicate to them those aspects of specific types of work which need to be given particular attention. Specific worked examples are also provided on the safety office website.

As it stands the form is primarily aimed at risk assessments where human health and the prevention of unintentional infection is the main concern. The form may need modification or expansion before it would be totally suitable for infectious work where environmental issues are the primary concern or where a large proportion of the work involved say gene therapy or the use of transgenic animals/plants.

**PART 1 ADMINISTRATIVE DETAIL**

Review History			
	Review 1	Review 2	Review 3
Due Date of Review			
Date Carried out			
Carried out by (initials)			

**1. PERSON/S RESPONSIBLE FOR THIS WORK (PRINCIPAL INVESTIGATOR)**

Name:	Position:
Faculty:	Department:

**2. OTHER STAFF INVOLVED**

Name	Position and Experience	Faculty	Department	Start date	Finish date (when known)

## PART 2 RISK ASSESSMENT

### 1. PROJECT TITLE

--

### 2. OVERVIEW OF PROJECT

*This information should provide both the scientific goals of the project and a simple explanation of the work so that the average member of the public can understand. If presenting the scientific goals poses problems in relation to intellectual property rights or commercial sensitivity please discuss further with the BSO.*

--

### 3. HAZARDS ASSOCIATED WITH THE WORK

If a commercial system is being used please provide a web link to the manual that includes safety data and details of the system. If obtained from colleagues please provide a reference with details of the vector system.

--

3.1 Is the system/s to be used based on:- Ad 2 or Ad 5

Yes	No
-----	----

ii. If No please indicate what serotype is to be used

3.2 Please give a general overview of system being used and the planned work (e.g. method of virus production, if animal work is to be carried out, whether the site of disablement of the virus is the site of recombinant gene expression etc). Please note that there is no need to repeat what is in section 2.

--

3.3 What is the host range of the adenovirus that will be produced?

--

3.4 Is there any potential for the generation of replication competent recombinant virus? i.e. are there common sequences in plasmids or the complementing cells lines that will allow homologous recombination to occur?

--

3.5 Please indicate the recombinant genes to be expressed, the activity of the gene and the promoter used to control expression. Include siRNA molecules under gene to be expressed and indicate what the result of modulating the expression of the target gene might be.			
Promoter Used	Gene to be expressed	Activity of gene/ consequence of expression	
3.6 Is there potential in the proposed work for mobilization of the integrated gene/ expression cassette by co-infecting adenoviruses? – If yes please explain.			
Preliminary Classification* (please tick):-	BSL 1	BSL2	BSL3

\* Consideration should be given to increasing the containment measures if there is deliberate manipulation of host range, use of a serotype that is known to provoke an exaggerated immune response or where the site of disablement is not where the foreign gene has been inserted.

3.7 Identify potential routes of infection in the laboratory:-					
Percutaneous Yes/ No	Inhalation Yes/No	Ingestion Yes/No	Splash in eye or mouth Yes/No	Animal bite or scratch	Needlestick Yes/No

4. SUMMARY OF THE WORK
<b>i) Description of the procedures:</b> (Please describe the nature of the work to be carried out. This might include growth, purification, storage and administration to animals. Identify any procedures that require additional controls e.g. the use of sharps, production of aerosols etc)
<b>ii) Substances used:</b> (Section 3 has details of specific organisms, however where appropriate give details of materials used such as clinical and environmental samples)
<b>iii) Quantities and frequency used:</b> (This is vital if potential exposure and hence risk is to be assessed properly. Please indicate the scale of the work in terms of the maximum culture volumes and the likely number of times the procedures will be carried out.)

--

**5. CONTROLLING THE RISKS: (Hierarchy of Controls)**

**5.1 Substitution:** Is substitution with a safer alternative practical? For example if a recombinant gene were expressed in the E3 region a safer alternative would be expressing the gene from the E1 region. Please explain your conclusions.

--

**5.2 Engineering Controls:** (Specify if they are required e.g. for airborne microbiological hazards the use of a biological safety cabinet may be necessary, if so, identify the type required - Class 1, Class 2 or Class 3)

--

**5.3 Administrative controls:**

**i. Is the work adequately isolated/ segregated?**

**a. Is/ are the room(s) shared with other workers not involved directly in this activity?** If so give details. Also indicate arrangements for maintenance staff and cleaning arrangements.

--

**b. Is access to the laboratory restricted?** Please provide details.

--

**ii. Assignment of Containment level:** With particular reference to section 3.6 please specify the containment level required and any other control measures necessary. Local codes of practice may be referenced. Other controls may include a stringent sharps policy, ensuring sealed rotors are used, limiting the quantity of agent used, the prohibition of lone working or specifying the level of supervision required,

--

**iii. Waste disposal procedures:** Add lines as required. Liquid waste might include cultures and culture medium, while solid waste includes items such as culture flasks. Clinical Waste might include human samples, blood, carcasses, sharps etc

	Detail of type of waste	Treatment before disposal	How disposed
Liquid Waste			

Solid waste			
Clinical Waste			

**iv. Emergency Procedures:** These should be detailed in the local code of practice, a brief summary is appropriate here.

--

**v. Transport:** Transport within the laboratory and between laboratories (including between campuses) should be documented in the local code of practice, a brief summary is appropriate here. How will these agents be transported within the laboratory to avoid splashes and spills e.g. between the incubator and safety cabinet?

--

**5.4 Personal Protective Equipment (PPE):** Please indicate what is required. Laboratory Coats must always be worn but the need for gloves, aprons, eye and respiratory protection etc will vary.

Lab Coat	Gloves	Eye or face (specify if yes)	Other (specify)
Yes/No	Yes/No	Yes/No	

**6. ENSURING CONTROL MEASURES ARE USED AND MAINTAINED**

**Please indicate what, if any, checks on control measures are required** e.g. annual maintenance of biological safety cabinets (also note the frequency of inspection needed).

--

**7. OCCUPATIONAL HEALTH ISSUES**

**Please indicate if environmental or personal monitoring is required.** (This is required only in exceptional circumstances where biological agents are concerned. If in doubt discuss the issue with the University BSO)

--

**Please indicate if Health Surveillance is required.** (Advice can be obtained from the University Health Service and is only appropriate in a few circumstances).

--

**Please indicate whether vaccination is required.** All those handling clinical specimens are expected to receive hepatitis B virus vaccination with post immunisation monitoring of antibody levels to ensure effective protection has been achieved.

**8. INSTRUCTION INFORMATION AND TRAINING**

Please indicate if there any specific training requirements:

**9. SIGNATURES**

The name and signature of the person making the assessment is required. Heads of department may also wish to sign but this is not necessary, however if the assessment is made by a student (undergraduate or postgraduate) or research assistant then their supervisor or PI should also sign.

Name of Assessor:	
Signature:	Date:
Name of Reviewer:	
Signature:	Date:
Head of Department:	
Signature:	Date:
